Ford, GM and Stellantis Joint Statement on Electric Vehicle Annual Sales

Today, Ford, GM and Stellantis announce their shared aspiration to achieve sales of 40-50% of annual U.S. volumes of electric vehicles (battery electric, fuel cell and plug-in hybrid vehicles) by 2030 in order to move the nation closer to a zero-emissions future consistent with Paris climate goals. Our recent product, technology, and investment announcements highlight our collective commitment to be leaders in the U.S. transition to electric vehicles. This represents a dramatic shift from the U.S. market today that can be achieved only with the timely deployment of the full suite of electrification policies committed to by the Administration in the Build Back Better Plan, including purchase incentives, a comprehensive charging network of sufficient density to support the millions of vehicles these targets represent, investments in R&D, and incentives to expand the electric vehicle manufacturing and supply chains in the United States. With the UAW at our side in transforming the workforce and partnering with us on this journey, we believe we can strengthen continued American leadership in clean transportation technology through electric vehicle innovation and manufacturing. We look forward to working with the Biden Administration, Congress and state and local governments to enact policies that will enable these ambitious objectives.
